

Canon MS400/500 Digital Reader Printers

Full network connectivity plus flexible image transmission capabilities bring a new level of operational convenience to high performance digital microfilm scanning.

Canon MS400/500 Specifications

Document imaging technology just took the next big step to improved productivity. Canon's newest Digital Microfilm Scanner/Printer System combines user-friendly digital versatility with network connectivity and the capability for convenient image transmission via the Internet, fax or e-mail. That makes the MS 400/500 a smart choice for businesses with growing information management requirements. Integration into existing document imaging systems is easy, and the compact desktop units are designed to operate in a general office environment.

These machines are digital Microfilm Scanners which can scan and print all types of microfilm in no time at all. The MS400/500 offer a wide range of scanning and printing features and can easily convert to PC and digital environments.

Compact and convenient, the MS400/500 provide extensive microfilm search and retrieval; combining sophisticated image adjustment features, desktop editing and clean 400 dpi document printing. In addition, the SCSI 2 interface and ISIS™ driver enable easy connection to a PC.

- Less than 8 seconds per frame
- scanning 400 x 400 dpi resolution for increased output quality
- 16mm and 35mm roll or cartridge film
- Border and background erasure
- Masking, trimming and zooming
- Automatic image polarity detection

- Optional SCSI PC Link
 - ***Simple Operation***

The MS400 offers easy manual operation. While the MS500 has an external keyboard for motorised zoom, rotation and focusing features.

Digital Versatility

The key to integration into document management systems is digital versatility. Easy conversion to a PC combines the benefits of both a computer database and microfilm storage. You can now access all your company information, including microfilm, via your PC.

Image Polarity Detection

This feature automatically detects the image polarity of both silver and diazo film. Positive prints are reproduced from both positive and negative film at a sharp 400 dpi.

Clean Printouts

The MS400/500 offer print border and background erasure. Plus masking and trimming for the editing of unwanted information. This saves costs by reducing toner use and assures clean printouts.
